WORK EXPERIENCE

Tavily – acquired by Nebius New York City, New York
GTM Data Analyst | *Go-to-market analysis, RevOps, Sales Ops, Data modeling, ETL, DAGs, Token Factory* Dec 2025 - Present
Founding data analyst; joined Tavily at the early-stage startup phase and stayed through its acquisition by Nebius (Feb 2026), building the revenue and GTM data foundation that Sales, SDR, CS and leadership use to make decisions

- Build and own the **GTM metrics layer** (ARR, MRR, NDR, GDR, bookings, pipeline, quota attainment) in **Snowflake** and **dbt**, modeling product usage, billing, and HubSpot CRM data with documented definitions and validation checks that give Sales, CS, and leadership a single source of truth
- **Forecast quarter-end** and year-end revenue from historical bookings and pipeline data, and apply **time-series analysis to NDR**, to support planning and target setting for Sales and leadership
  Predict deal-closing likelihood from historical close patterns, helping reps with overloaded pipelines prioritize which use cases and industries to work first
- Analyze **funnel conversion**, MQL qualification, lead scoring and lead assignment logic to pinpoint where leads stall; develop **source attribution** (Marketing vs. SDR vs. AE) reconciled against **HubSpot** so reporting matches the CRM
- Build **Airflow DAGs** that alert Sales and SDR reps and managers in real time on bookings and key pipeline events, with **open-source LLMs** served through Nebius Token Factory; build **Omni dashboards** for Sales leadership covering pipeline health and SDR performance
- Audit CRM workflows with GTM Ops and recommend changes that improve GTM efficiency and analyze **A/B tests** and product usage across industries to guide the product team's benchmarking priorities

Easley-Dunn Productions, Inc. Torrance, California
Data Scientist | *Simulation Modeling, A/B Testing, Game Economy Analytics, Data Analysis (Excel, SQL, Notion)* Jul 2025 - Nov 2025

- Mentored 4 cross-functional engineers building **Python** and **Jupyter** simulation pipelines for the Card Character Acquisition System (CCAS), modeling drop rates, duplicate-card logic and XP progression, and exporting JSON for **Unity** runtime integration
- Maintained **A/B testing** frameworks, data ingestion and player telemetry pipelines; ran large-scale persona simulations and segmentation analysis to tune the game economy and validated changes in telemetry dashboards

Esri - Public Health Department Redlands, California
Data Analyst Intern | *Geographic Information Systems GIS, Health Data Analysis, Geo-Temporal Data Visualization, Predictive Analytics* Jun 2024 - Aug 2024

- Analyzed **1M+** CDC National Vital Statistics System records on U.S. drug overdose deaths (2015–2024) using **GIS and statistical modeling** to identify key trends and demographic disparities
- Delivered 10+ reports with **ArcGIS** StoryMap, Dashboard, and Hub, with Tableau and ArcGIS Pro maps, showing spatial and demographic patterns to public health stakeholders

EDUCATION

University of Southern California Los Angeles, California
Master of Science in Analytics **GPA: 3.75/4** Aug 2023 - May 2025
Viterbi School of Engineering: Predictive Analytics, Database Management, Business Intelligence, Optimization for Analytics, Text Analytics (NLP), Data Analytics & Consulting, Research - ETL, GCP-LLM. Marshall School of Business: Blended Data Business Analytics

1. Teaching Assistant - CSCI 491: Final Gaming Projects
2. Graduate Ambassador at Society of Women Engineers (SWE USC)

Dr. Vishwanath Karad MIT World Peace University Pune, Maharashtra
Bachelor of Technology in Computer Science and Engineering **GPA: 3.84/4** Jul 2019 - May 2023
Big Data Analytics, Deep Learning, Cloud Computing, Artificial Intelligence, Data Warehousing and Data Mining, Database Management System, Design and Analysis of Algorithms, Data Structures and Distributed Systems, Computer Networking, Computer Architecture and Applications, Operating Systems, IoT

1. Winner - HackMIT Innovation Hackathon 2022
2. Affiliate Manager - Society of Women Engineers (SWE MITWPU)
3. Patent granted by CIPC, South Africa
4. Research Paper: (Springer ICOECA 2023)

SKILLS

- Languages: SQL, Python, R, JavaScript, Go
- Data Engineering: Snowflake, dbt, MongoDB, Airflow, BigQuery, Databricks, PySpark, DuckDB, ETL/ELT, Terraform, data modeling
- BI & Analytics: Omni, Tableau, Power BI, ArcGIS, A/B testing, regression, funnel and cohort analysis
- GTM Systems: HubSpot, Salesforce, CRM data modeling, lead routing and qualification (MQL), source attribution, ARR/NDR/GDR reporting
- ML & AI: PyTorch, TensorFlow, Statsmodels, Token Factory, Forecasting, Predictive modeling, esemble models, LLM inference (Nebius Token Factory)
- Cloud & Infrastructure: AWS (S3, Glue, Lambda, Athena), GCP

PROJECTS

QueryVerse – Interactive Data Analytics and SQL Compiler Platform

- Built a full-stack data platform (**FastAPI**, **DuckDB**, **Pandas)** supporting dataset uploads up to 1GB, SQL querying <100ms response times, dynamic dashboards
- Integrated **DBT-style transformations** to streamline data modeling and testing

UberLens – Interactive Uber Data Analytics and Business Intelligence Platform

- Developed ride-sharing analytics on **Databricks SQL** and **Delta Lake** to process **100K+ trips**, <2s query response time, 15+ interactive dashboards
- Analyzed 24-hour and 7-day demand patterns to find **35% of revenue concentrated in rush hours** (7-9 AM, 5-7 PM), and surfaced fare optimization opportunities averaging $18.50 per trip

Health Risk Prediction Pipeline

- Built a scalable ML pipeline on **GCP (BigQuery, Kubeflow Pipelines, Vertex AI)** to predict cardiovascular risk across nearly 200K patient records, including imputation and feature engineering, and deployed the final model for real-time inference
- Trained Random Forest, Logistic Regression, and Gradient Boosting models in parallel and combined them in a **Voting Classifier ensemble**, reaching a **97% F1-score** against **a 95% target**
